SUMMARY

Early-career software engineer with internship experience building web services, data pipelines, and internal developer tools. Comfortable with Python, TypeScript, React, PostgreSQL, Docker, and AWS. Authorized to work in the United States without employer sponsorship.

EDUCATION

Redwood State University - B.S. Computer Science

GPA: 3.6/4.0 | Coursework: Data Structures, Algorithms, Databases, Operating Systems

May 2026

San Francisco, CA

EXPERIENCE

Software Engineering Intern - Northstar Cloud

May 2025 - Aug 2025

San Francisco, CA

- Built Python and FastAPI endpoints for an internal deployment service used by 40 engineers.
- Added PostgreSQL query indexes and request caching, reducing median response time by 32%.
- Created integration tests and GitHub Actions checks that caught deployment regressions before release.

Software Engineering Intern - Cedar Analytics

May 2024 - Aug 2024

Remote

- Developed React and TypeScript dashboards for monitoring customer data imports.
- Implemented validation and retry handling for a Kafka ingestion worker processing 250,000 events per day.
- Documented on-call runbooks and added Prometheus alerts for failed imports.

PROJECTS

Campus Event Planner | TypeScript, Next.js, PostgreSQL, Docker

- Built a full-stack scheduling application with role-based access, calendar search, and email reminders; deployed the service with Docker and automated database migrations.

Distributed Key-Value Store | Python, gRPC, Pytest

- Implemented leader election, replicated writes, and failure-recovery tests for a three-node academic system.

SKILLS

Languages: Python, TypeScript, Java, SQL, HTML/CSS

Frameworks: React, Next.js, FastAPI, Node.js

Tools: PostgreSQL, Docker, AWS, GitHub Actions, Kafka, Prometheus, Linux
